EcoRI-NotI cut cDNA was then ligated into the vector. Vector: BBluescript II KS(+); Site_I: EcoRI; Site_2: NotI Host: Escherichia coli DH108.

This sequence is from the
BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection,
from a library constructed by Blizabeth Bosch. cDNA was prepared
from RNA extracted from cerebrum, and poly A-trimmed. EcoRI-NotI
cut cDNA was then ligated into the vector. Vector: pBluescript II
KS(+); Site 1: BCORI; Site 2: NotI Host: Escherichia coli DH10B.

This sequence is from the BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection, from a library constructed by Elizabeth Bosch. cDNA was prepared from RNA extracted from cerebrum, and poly A-trimmed. BcoRI-NotI cut cDNA was then ligated into the vector. Vector: pBluescript II KS(+); Site 1: EcoRI; Site 2: NotI Host: Escherichia coli DH10B. Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             81

The present sequence is that of cDNA encoding human NOGO-A (see AAB82349). NOGO-A is a previously known splice variant of the human NOGO gene on chromosome 2p21. NOGO-A CDNA was obtained by PCR amplification of human spinal cord CDNA. The invention relates to a novel splice variant, NOGO-C (see AAF90323). It provides NOGO-C polypeptides and polymuclectides, and methods for producing such polypeptides and polymuclectides in the treatment of diseases including neuropathies, spinal injury, brain injury, stroke, neuronal degeneration, for example Alzheimer's disease and Parkinson's disease, neuromuscular disorders, psychiatric disorders and developmental disorders. Also provided are methods for identifying agonists and agonists for use in treating conditions associated with NOGO-C impalance, and disposit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ServalvalAspLeuLeuTyrTrpArgAspIleLysLysThrGlyValValPheGlyAla 20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                140
                                                                                                                                                                                                                                                                                           The invention relates to human MAGI protein, which is similar to neuroendocrine-specific protein. The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, spinal injury, neuronal degeneration, neuromuscular disorders, psychiatric disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleotide is also useful for chromosome localization and for tissue expression studies. The present sequence represents a DNA encoding the human MAGI protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                40

The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE polypeptides capable of binding with each other, monitoring the interaction between these polypeptides, and determining if the test agent is a modulator of Nogo or BACE activity. The method is useful in treating caute neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neplastic (e.g. glioblastomas, cartenance), hyperproliferative or dysproliferative disorders (e.g. irrhobastomas), hyperproliferative or dysproliferative disorders (e.g. irrhobasis, psoriabis, keloid formation, fibrooystic conditions, tissue hypertrophy) of the central nervous system. The BACE polypeptide is useful in screening methods to identify agents that may act as modulators of BACE activity and in particular agents that may act as modulators or dand the polymucleotide encoding the BACE polypeptide are useful in anniation a medicament for the treatment or prevention of disorders responsive to the modulation of Nogo activity, in alleviating the symptoms or improving the condition of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading of a sasays, a probe, in recombinant protein synthesis, and in gene therapy econdition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3069

The method involves administering NS-specific activated T cells, NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a change in expression of the gene in an expression of the gene in an expression of the gene in the agent, and identifying fat cell number or size in the subject. The agent comprises an antisense of ignouncleotide. The subject comprises a mammal, preferably a human. The method also comprises providing a polypeptide and an agent, exposing the polypeptide to the agent, detecting binding of the agent to the golypeptide or a change in an activity of the polypeptide, treating a subject with the agent and identifying fat cell number or size comprises an antibody. A method of regulating fat cell number or size comprises providing a subject containing fat cells and an agent the agent comprises providing a subject containing fat cells and an agent the agent and identifying a define the subject that changes the expression of a gene, and treating the subject and an expression of a gene, and treating the subject and an expression of a gene, and treating the subject and an expression of a gene, and treating the subject and an expression of a gene, and treating the subject and an expression of a gene, and treating the subject and an expression of a gene, and treating the subject and an expression of a gene, and treating the subject and an expression of a gene, and treating the subject and an expression of a gene, and an expression of a gene, and an expression of a gene, and an expression of a gene, and an expression of a gene, and an expression of a gene, and an expression of a gene, and an expression and an expression of a gene, and an expression and an expression and an expression and an expression and an expression and an expression and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     with the agent under conditions so that fat cell size or number in the subject is altered. The method is useful for identifying compounds that influence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents human cDNA used in the scope of the invention.
                                                                                                                                                                                                                                                                                     Human, gene, 88; fat cell number, fat cell size, obesity, diabetes, anorectic, antidiabetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3579 BP; 1074 A; 803 C; 812 G; 890 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         140
                                                                                                                                                                                                                                 The invention relates to a myelin-associated glycoprotein (MAG) derivative comprising a mucation in or flanking MAG Ig-like domain 5 (Igd5), excluding the MAG derivative MAG (d1-3)-FC, where the mutation reduces or eliminates the ability of the derivative to regulate neurite outgrowth as compared to endogenous or soluble MAG without eliminating binding to neuronal surfaces. The inhibitors of MAG are useful for promoting neural growth and regeneration. They are also useful for treating neural degeneration associated with injuries, disorders, or diseases. The disorder, disease, or condition is associated with appoptosis or results from a demyelinating disease and includes amylotrophic lateral sclerosis, Alzheimer's disease, Parkinson's disease, Huntington's disease, multiple sclerosis, Creutzfeldt-Jacob disease, kuru, multiple system atrophy, amylotrophic lateral sclerosis (Lougehrig's disease) or progressive supranuclear palsy. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                New myelin-associated glycoprotein (MAG) derivative comprises a mutation in or flanking MAG Ig-like domain 5 (Igd5), excluding the MAG derivative MAG (d1-3)-Fc, useful promoting neural growth and regeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20

The present sequence is a cDNA encoding bovine Nogo protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelin material with which it is natively associated. The present sequence was obtained from bovine spinal cord white matter cDNA library. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma, medulloblastoma, craniopharymgioma, ependyoma, pinemagioma, heemangioblastoma, acoustic neuroma, oligodendroglioma, pinemagiona, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative cor benjay dysproliferative disorders e.g. psoriasis and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or compensation of neurons or compensation of maintenance are deficient or desired. The animal models can be used in disquanceir and screening methods for predisposition or disorders and to screen for or test molecules which can treat or prevent disorders and screening methods for predisposition or provent disorders or diseases of the CNS. Note: SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID No. 29 in disclosure of the

                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG, human NiG-D20 or human NogoA 623-640 with a dissociation constant of; less than 1000AM. Also described: (1) a polynuclectide encoding the binding molecule; (2) an expression vector or system comprising the polynucleotide; (3) a host cell comprising the binding molecule and a carrier or of miluent; and (5) treating diseases associated with nerve repair. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS) injury or neurodegenerative disorders. The present sequence encodes human NogoA, which is used in the exemplification of the present invention.

The invention relates to the use of the nogo receptor, nogo protein, their nucleic acids, vectors expressing them and antibodies against them, to isolate agents which block nogo receptor mediated axonal growth. The agent is useful for treating a central nervous system disorder which is a result of cranial or cerebral traums, spinal cord injury, stroke or a demyelinating disease selected from multiple sclerosis, monophasis

                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                            유
                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel nucleic acid encoding a polypeptide comprising amino acid residues 27-309 of a 473 amino acid sequence (Pl, human Nogo receptor (NgR) NTLRRCT domain), or residues 27-309 of Pl, in 1-20 conservative amino acid substitutions, and less than a complete CTS domain, provided that a partial CTS domain, if present, consists of no more than the first 39 consecutive residues. The nucleic acid of the invention has neuroprotective activity. The polymucleotide may have a use in gene therapy. The nucleic acid is useful for decreasing inhibition of axonal growth by a central nervous system (CNS) neuron. The NGR polypeptide or an agent inhibits the binding of Nogo to NgR or NgR capinal transduction in the central nervous system disease, disorder or injury, e.g. used in treating central nervous system disease, disorder or injury, e.g. thibition of axonal regeneration following cranial, cerebral or spinal complaint displayment and intiple solarization, encephalopathy, panencephalopathy, panencephalopathy, panencephalopathion of the invention continued the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3323

cuch as solid tumor by providing peripheral blood sample of human having non-blood disease, and comparing an expression profile of specific genes in the peripheral blood sample to reference expression profile of the genes; where each of the genes is differentially expressed in peripheral blood mononuclear cells (PBMCs) of patients having the disease as compared to PBMCs of normal humans. The method is useful for diagnosing non-blood disease such as solid tumor. The solid tumor is chosen from renal cell carcinoma (RCC), prostate cancer and head/neck cancer. The peripheral blood sample comprises enriched PBMCs. The peripheral blood sample (claimed). (Mn) is useful for identifying genes that are differentially expressed in peripheral blood samples is and/or other solid tumors. This sequence corresponds to a gene that is differentially expressed and detected by the method of the invention. (Note: this sequence is not given as part of the printed specification to the was obtained from WIPO in electronic format at the invention of the wipo./pub/published_pot_sequences).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3263
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3323
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3383

The invention relates to 40 human secreted proteins (AAY94981-Y95020),
and cDNA sequences encoding them (AAA23423-A23462). The secreted proteins
CC of the invention include those that are thought to be only partially
secreted, i.e., transmembrane proteins. The proteins of the invention may
CC exhibit one or more activities selected from the following: cytokine
exhibit one or more activities selected from the following: cytokine
cativity; cell proliferation; differentiation; immune modulation;
cativity; chemotactic/chemokinetic activity; haemostatic and thrombolytic
activity; anti-inflammatory activity; and tumour inhibition and thrombolytic
activity; anti-inflammatory activity; and tumour inhibition activity. The
proteins may be administered to patients as vaccines, and the nucleotides
CC autoimmune diseases; genetic disorders; haemophila; cardiovascular
Cd seases; cancer; bacterial, fungal and viral infections, especially HIV;
Cd iseases; cancer; bacterial, fungal and viral infections, especially HIV;
Cd diseases; rheumatoid arthritis; pulmonary inflammation;
Cd iseases, nathem and anaemia. They may also be used for
treating wounds, burns, ulcers, osteoporosis, osteoarthritis, periodontal
CC diseases, Altheimer's disease, Parkinson's disease,
and amyotrophic lateral sclerosis (ALS): Proteins with activin/inhibin
cativity may additionally be useful as contraceptives. Nucleic acid
sequences of the invention may be used in chromosome mapping, and as a

The invention relates to an isolated polynucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b) complements of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-ABF68637) encoded by (I) and oligonucleotide can be used to detect cancer in a patient and compositions comprising polypeptides, polynucleotides, antibodies, tusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating parcreatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and proteins in the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequence
